To whom it may concern,

As a member of ZF group and an automotive company with 200 employees, we have decided to use Doruk Automation system in 2007 for monitoring the production activities, productivity, TPM and ppm control activities.

We have been utilizing this system since around 1 year to control and increase the productivity of the workers (min 5 % achieved) and monitoring the machine utilization to take necessary actions.

Almost 60 % of the cycle times of the operations performed in the workshop have been revised by the help of the data obtained from Doruk system.

As a motivation issue, we have implemented the "best operator of the month" event within the plant by the help of the data extracted from Doruk system. Among the 5 criterias for choosing the best operator of the month, 2 of them is directly obtained from this system.

Due to above mentioned benefits gained from the usage of Doruk system, we strongly recommend to utilize this system to the companies which want to monitor the production by an easy and effective method.
